DETAILED ACTION

1. This Office Action is in response to the applicant's amendment filed on 6/12//2008.

Priority

2. Applicant is reminded that in order for a patent issuing on the instant application to obtain the benefit of priority based on priority papers filed in parent Application No. 09/113057 under 35 U.S.C. 119(a)-(d) or (f), a claim for such foreign priority must be timely made in this application. To satisfy the requirement of 37 CFR 1.55(a)(2) for a certified copy of the foreign application, applicant may simply identify the application containing the certified copy.

Information Disclosure Statement

3. An initialed and dated copy of Applicant's IDS form 1449 is attached to the instant office action.

Response to Arguments

4. The following changes to the claims are acknowledged:
Claims 1, 3, 5, 8, 14 and 16 were amended by the applicant
Claims 9 and 20-26 were canceled by the applicant.

Oath/Declaration

There is no evidence of receiving a new oath and certified copy of foreign application PO7991 to date.

Claim objection – Claim 16

The examiner accepts the amended text and therefore withdraws the objection.

Obviousness-type Double Patenting

The terminal disclaimer with respect to co-pending application No. 10/729,159 and US Patent No. 7,187,404 has been received and processed. Therefore the rejection is withdrawn.

35 USC 112 – Claim 3

The examiner accepts the amended text and therefore withdraws the rejection.

35 USC 102(b)/103(a) – claims 1-26

Incorporation of allowable subject matter of claim 9 and preceding claims 5 and 8 into amended claim 1 is acknowledged. The examiner accepts the amended text and therefore withdraws the rejection of claims 1-8 and 10-19.

Allowable Subject Matter

5. Claims 1-8 and 10-19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding independent claim 1 (Currently Amended), the prior art of record fails to teach or fairly suggest the combination of all limitations required in the claim:

A handheld camera, said camera comprising:

a sensor adapted to sense an image;

an input for receiving predetermined data representing a respective form of data manipulation, the predetermined data being disposed on a surface of the card; and,

a processing system, the processing system being adapted to:

obtain the image from the sensor,

determine a card image in accordance with signals received from the input,
rotate the card image in accordance with a skew of the card with respect to the
input.

and manipulate the image in accordance with the predetermined data to thereby generate a manipulated image.

Regarding claims 2-8 and 10-19, these claims depend on claim 1.
